Learner overview

- Some of you will have experience. Others will not. There is no one size fits all.
- Online courses are always flexible, but we've explicitly built in flexibility with recommended paths. The purpose of this video is introduce you to these paths.

Project-based learning

- Ultimately what's important is that you demonstrate your learning. This is what the course assessments are for. Sometimes there will be a quiz, but often it's a programming assignment building around one project.

Core content

- These videos introduce the core ideas and concepts. Lecture style. Sometimes they ask you to stop and think.

Concept Challenge

- But after listening, how do you know if you've really got it? The concept challenge videos always include an IVQ and allow you to engage with the material in a deeper way.
- Leo will say more.

Additional Support Videos

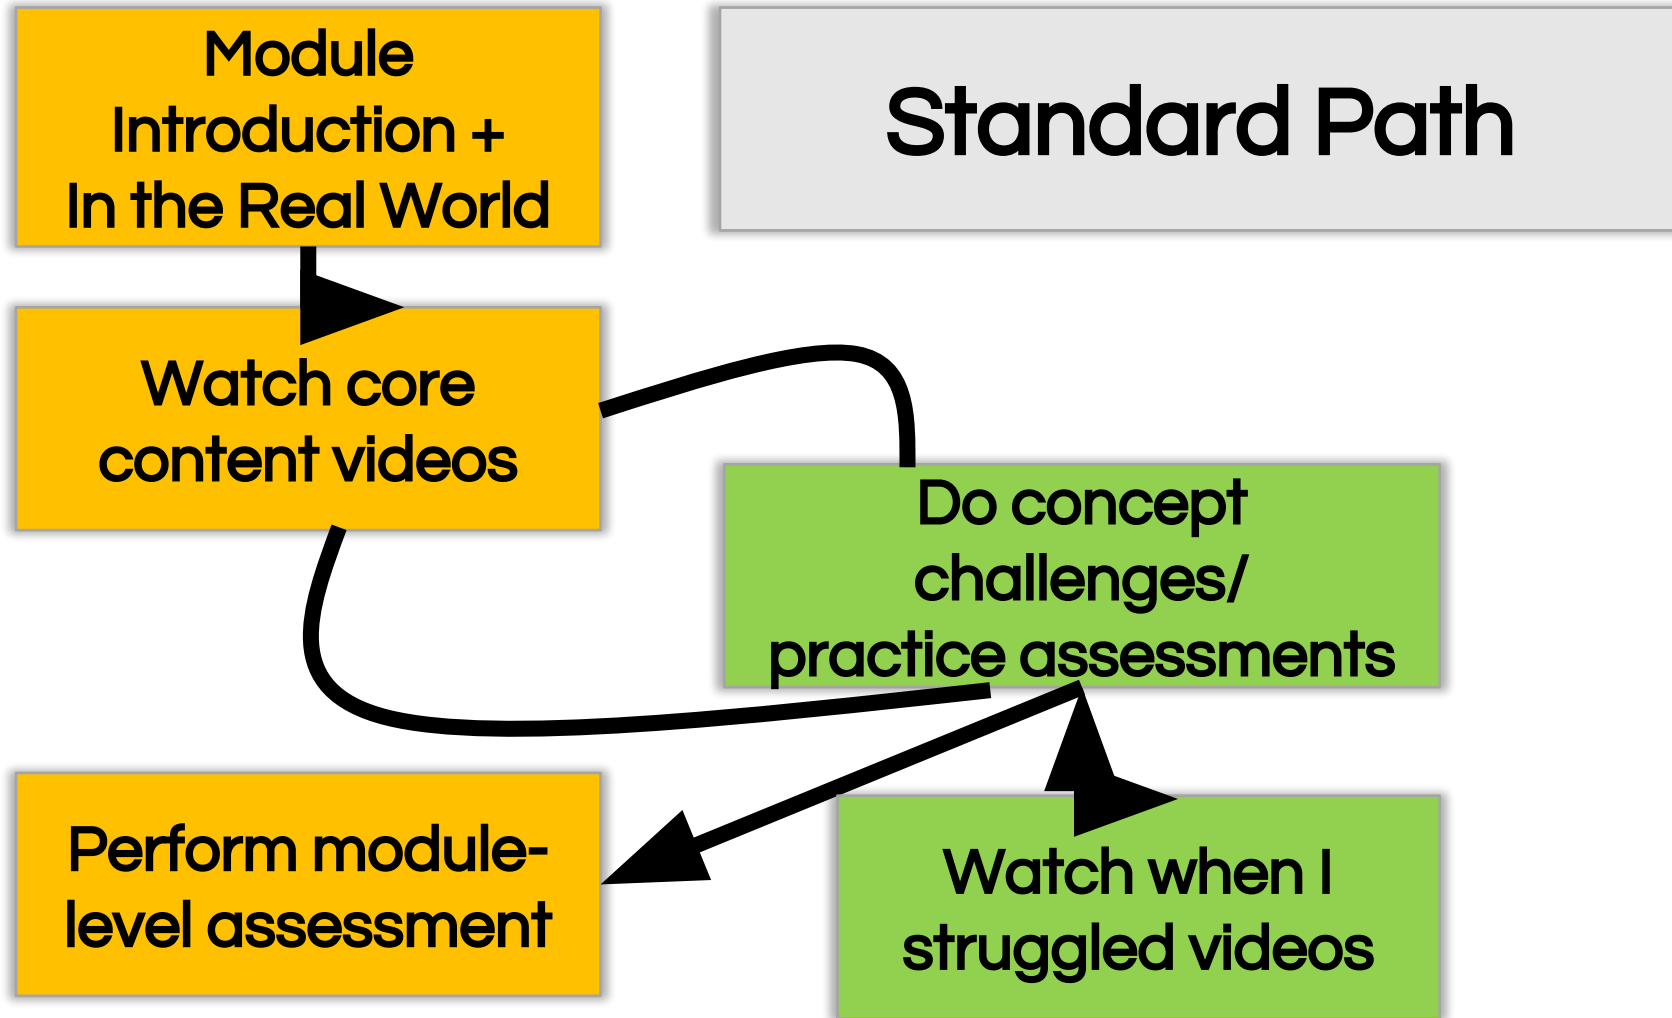

- Optional. If you are feeling unsure and want more practice or more explanation.

In the Real World

- Exciting. Engineers from Google explaining why the concept you are learning matter.

When I struggled

- Students telling stories that you might relate to.
